Richard Rodas

Fullstack Engineer | Micro-frontends (React, Next.js, Angular) & Microservices (Node.js, Nest.js) | TypeScript | AWS & Azure | 5+ years in banking & enterprise | English (C1) | Remote (US/Canada) Peru

Summary

Fullstack Engineer with 5+ years shipping production web apps end to end, from Angular, React and Next.js micro-frontends to Node.js and Nest.js microservices, for top-tier banks and enterprise clients across Latin America and a global AI talent platform serving 100K+ users. On the frontend: Angular (v13-v21), React and Next.js with TypeScript, RxJS and state management (NgRx/Redux), working within micro-frontend architectures, plus testing with Jest/Jasmine/Cypress. On the backend: REST APIs and microservices with Node.js, Nest.js and Express, backed by PostgreSQL/MySQL. Deployed and operated on both AWS (S3, Lambda, RDS, CloudWatch) and Azure (Azure DevOps, CI/CD pipelines). Some results I'm proud of:- Built the Candidate Match module of ManpowerGroup's AI talent suite, processing batches of up to 1,000 candidates and reducing manual screening work by ~90%.- Developed the biometric digital-signature frontend for a leading bank's branch agents, cutting transactional processing time by ~60%.- Contributed backend REST APIs (Nest.js/TypeScript) within a microservices architecture alongside frontend work for banking clients, and designed a full-stack SSO system (Angular + Nest.js/.NET) that centralized company-wide access, with a security audit measuring a 60% reduction in vulnerabilities.- Modernized a legacy monolith into a microservices architecture (Nest.js backend, Angular/React micro-frontends), improving application performance by ~50%.- Solo-built and operate the full production stack for Magrolabs, a D2C supplement brand: Node.js/Express/Prisma API, the Next.js storefront, PostgreSQL, payment webhooks, and LLM-powered features with full observability. I'm comfortable owning a feature end to end: UI, API, database, deployment. It's the kind of full-stack ownership startups need from a small, senior team. Fluent in English (C1). Based in Lima, Peru (EST-aligned time zone). Currently open to full-stack and frontend remote

roles with US and Canadian startups. richard@rodasridar.dev ·

Experience

ManpowerGroup

Senior Full Stack Developer

March 2026 - August 2026 (6 months)

Wisconsin, United States

Fullstack development for a global AI-powered talent acquisition suite used by recruiters across ManpowerGroup to source, match, and manage candidates, serving 100,000+ users across the organization.

- # Built the Candidate Match module (Angular 21 + TypeScript), the core AI-driven matching feature that processes batches of up to 1,000 candidates per run, reducing manual screening work by ~90%. Integrated third-party services (Vyndly) against a Nest.js backend.

- # Developed an internal blog/content platform for the entire organization (100K + users), delivering 20+ UIs across 4 modules from design to production.

- # Integrated REST microservices (Nest.js) into the Nx monorepo, connecting Angular frontend modules to backend services.

- # Automated repetitive content-creation workflows by building reusable AI skills, cutting ~4 hours of manual work per week and standardizing blog production across teams.

- # Wrote unit tests with Jest to maintain code quality across modules in an Agile workflow.

- # Worked in a distributed team of 10 across the US, India, Mexico, and Peru, with daily collaboration and standups in English.

Tech stack: Angular 21 · TypeScript · NgRx · Tailwind CSS 3.4 · PrimeNG · Nx · Jest · Cypress · Chart.js · Nest.js · Node.js · Express.js · REST APIs · Git · Docker · Azure DevOps · Agile/Scrum

Globant

1 year 11 months

Senior Full Stack Developer

April 2025 - March 2026 (1 year)

San Isidro

Fullstack development within a microservices and micro-frontends architecture, for a high-security branch platform used by bank agents to serve customers face-to-face: account statements, transactions on behalf of clients, and account opening, for one of the region's leading banks.

- # Built the frontend for a biometric digital-signature flow enabling customers to sign bank contracts with their card and biometrics, digitalizing a high-security paper process and cutting transactional processing time for branch agents by ~60%.

- # Led frontend work on the Angular 14 to 16 migration, modernizing the codebase while keeping the agent platform in production.

- # Developed secure UIs for sensitive banking operations (statements, transactions, account creation) under strict security and compliance requirements.

- # Contributed backend REST APIs (Nest.js, TypeScript) within a microservices architecture, extending full-stack ownership beyond the Angular UI.

- # Collaborated in a distributed team of 12 across Mexico, Colombia, and Argentina.

Tech stack: Angular 14/16 · TypeScript · NgRx · RxJS · Tailwind CSS · Jest/ Jasmine · Nest.js · Node.js · Postgres · AWS S3 · AWS Lambda · CloudWatch · Git · Docker · Bitbucket · Micro-frontends · REST APIs · Agile/Scrum

Full Stack Developer

May 2024 - April 2025 (1 year)

San Isidro

Fullstack development within a microservices architecture, for a digital currency-exchange product offering preferential FX rates to retail customers, for one of the region's largest banks.

- # Built new user-facing UIs for the FX exchange flow within a micro-frontend architecture (Angular + React pieces), using NgRx/Redux for state management and RxJS.

- # Executed the Angular 13 to 16 migration of the application, improving maintainability and unlocking modern framework features.

- # Implemented XSRF token protection on the frontend, hardening the app against cross-site request forgery attacks.

- # Implemented analytics tagging with GA4 and Adobe Analytics across key user flows, enabling product and conversion tracking.

Contributed backend REST APIs (Nest.js, TypeScript) within a microservices architecture, extending full-stack ownership beyond the Angular UI.

Worked in an Agile team of 8.

Tech stack: Angular 13/16 · TypeScript · NgRx · RxJS · Tailwind CSS · React · Jest/Jasmine · Nest.js · Node.js · Postgres · AWS S3 · AWS Lambda · CloudWatch · Git · Bitbucket · Micro-frontends · REST APIs · GA4 · Adobe Analytics

Social Capital Group

Semi-Senior Full Stack Developer

November 2023 - May 2024 (7 months)

Miraflores

Full-stack development of internal business platforms, owning features end to end from UI to database, within a microservices and micro-frontends architecture.

Developed, maintained, and optimized backend (microservices) and frontend (Angular) functionality.

Designed and optimized MySQL databases and data-access functionality.

Participated in frontend and backend architecture decisions and agile project management.

Implemented CI/CD pipelines and supported deployments on AWS (S3, Lambda, and RDS).

Designed and prototyped interfaces and user experiences.

Tech stack: Angular · TypeScript · NgRx · Tailwind CSS · Jest/Jasmine · Nest.js · Node.js · Docker · AWS S3 · AWS Lambda · CloudWatch · MySQL · Git · GitHub · Micro-frontends · REST APIs

T-ID Solutions

Semi-Senior Full Stack Developer

July 2023 - September 2023 (3 months)

Lima, Peru

Full-stack development of vehicle-identification solutions for T-ID Solutions, part of the German TÖNNJES group.

Migrated a legacy ASP.NET + Angular monolith to a microservices architecture (Nest.js backend, Angular and React micro-frontends), improving application performance by ~50%.

- # Performed integration testing to ensure quality and correct behavior of delivered solutions, and supported escalated technical incidents.
- # Trained end users on the delivered systems and proposed solution designs from requirements analysis.

Tech stack: Angular · React · TypeScript · NgRx · Tailwind CSS · Jest/Jasmine · Nest.js · Node.js · PostgreSQL · MongoDB · Git · Azure DevOps · Docker/Portainer · Micro-frontends · REST APIs

Asociación de Exportadores ADEX

Semi-Senior Full Stack Developer

August 2022 - July 2023 (1 year)

Lima

Full-stack development of internal web applications for Peru's exporters association.

- # Designed and built a Single Sign-On (SSO) system (frontend + backend, Angular + Nest.js) centralizing employee access to all company web applications, reducing security vulnerabilities by ~60% by eliminating scattered credential handling.
- # Delivered dashboards, advanced filters, and search enhancements across management modules in Agile sprints.
- # Developed components, tests, and refactors in React for an internal OKR (Objectives and Key Results) management system.
- # Participated in Continuous Integration management using two AWS services for build and deployment automation.
- # Gathered requirements directly with stakeholders and resolved production incidents escalated from the service desk.

Tech stack: React · Angular · TypeScript · NgRx · Tailwind CSS · Nest.js · Node.js · MySQL · Git · AWS S3 · AWS Lambda · CloudWatch · REST APIs · Figma

Vida Software SAC

Junior Full Stack Developer

July 2021 - June 2022 (1 year)

Santiago de Surco

Fullstack development of a multi-tenant SaaS platform for business data analytics: each client company logged in with its own account to visualize its data through embedded Power BI dashboards.

Built frontend features (Angular) and backend services (Node.js/Express) powering the multi-tenant SaaS platform.

Designed and managed the Postgres database layer supporting each client's data models and reporting.

Integrated Power BI dashboards into the platform so each client could visualize its own business data.

Tech stack: Node.js · Express · Angular · TypeScript · NgRx · Postgres · Git · REST APIs

Education

Universidad Peruana de Ciencias Aplicadas
Bachelor's Degree, Systems Engineering · (January 2023)

CIBERTEC
Bachelor of Technology, Informatics · (2019 - 2022)
